

Our Partner “**Territory 2:2**” in Lutsk, Ukraine, wrote to us in January : “Our **Be Smart** centre has been working for almost 3 years now, teaching English as an evangelistic outreach. This year we’ve started Polish and German classes, and also a Development Centre for children aged 1 to 6, called “**I Grow**”. This is for children who don’t go to Kindergarten because of health or other issues, so they need a small group, and that is what we offer. Our concern is for children with special needs, who need to learn to communicate with other children and develop in other ways too. We need a lot of equipment and other material that is expensive but would be very helpful for us.”

In response to this, a Foundation in the UK gave very generously to purchase all the equipment needed, and here is the joyful response from Slava at **Territory 2:2** -

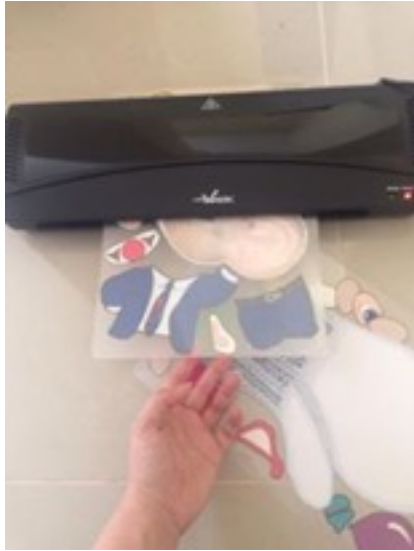

We are extremely happy to have new facilities in our school. Thank you for making it a reality to have all these items in our school.

This ball pool is the most popular place with all the children 😊

And things that are multipurpose

This laminator gives an opportunity to use all the paper materials (like flash cards, different sorting items) for many times and keep them in a good shape.

And the projector that came few days ago is in its place ready to be used.

We also have new mosaics

And other tools for skill development

Balls that are always fun and can be used in different ways.

And of course Play dough with tools.

Thank you for your generous hearts!
